DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 3-7, 9-16, 18-27, 29-32 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

With respect to claim 1, the prior art of record fails to teach or suggest in combination the claimed limitations of "uploading from a first wireless communication terminal with the subscriber information card being mounted, to a server via a communication network, updated part of data which is stored in a memory in the first wireless communication terminal, in accordance with a user's request or automatically, said uploading being performed with only data updated after the subscriber information card was mounted on the first wireless communication terminal, while leaving the uploaded data in the memory in the first wireless communication terminal even when the subscriber information card is dismounted from the first wireless communication terminal, wherein said uploading is allowed to be executed at least under conditions that the user is confirmed to be an authenticated user of said subscriber information card and an authenticated user of the first wireless communication terminal".

All dependent claims that depend from claim 1 are allowable for the same reason indicated above.

With respect to claim 7, the prior art of record fails to teach or suggest in combination the claimed limitations of "a terminal side synchronization engine which requests execution of synchronization to said server after said subscriber information card is mounted, uploading or downloading of data being executed with said server as required, said uploading being performed with only data updated after the subscriber information card was mounted on the wireless communication terminal, leaving the uploaded data in the memory, even when the subscriber information card is dismounted from the wireless communication terminal, and said downloading being performed with only data which is present in the storage unit of the server and which is not present in the memory of the wireless communication terminal".

All dependent claims from claim 7 are allowable for the same reason stated above.

With respect to claim 15, the prior art of record fails to teach or suggest in combination the claimed limitations of " a terminal side synchronization engine which requests execution of synchronization to the server on the communication network after the subscriber information card is mounted, and executes uploading or downloading of data with the server as required, said uploading being performed with only data updated after the subscriber information card was mounted on the terminal, leaving the uploaded data in the memory even when the subscriber information card is dismounted from the terminal, and said downloading being performed with only data which is present in a storage unit of a server and which is not present in the memory of the terminal, and wherein said synchronization engine allows the synchronization to be executed at least

under conditions that the user of the terminal who requested the synchronization is confirmed to be an authenticated user of said subscriber information card and an authenticated user of the terminal".

All dependent claims from claim 15 are allowable for the same reason as stated above.

With respect to claim 27, the prior art of record fails to teach or suggest in combination the claimed limitations of "a server side synchronization engine which performs synchronization with said wireless communication terminals for user data stored in said storage unit, in accordance with a request from said wireless communication terminals, said synchronization being performed with only data updated after the subscriber information card was mounted on one of the wireless communication terminals, while leaving uploaded data stored in the wireless communication terminal even when the subscriber information card is dismounted from the wireless communication terminal; and an authentication engine which allows only plural wireless communication terminals possessed by an identical user to perform synchronization for the user data of the user in the storage unit, wherein said authentication engine allow synchronization to be executed at least under conditions that the user is confirmed to be an authenticated user of said subscriber information card and an authenticated user of the wireless communication terminal on which said subscriber information card is mounted".

All dependent claims from claim 27 are allowable for the same reason as stated above.
